

1 Day excursion - Energy in the Basel Region.

It is not easy for consumers to differentiate products in the energy sector. After all, a kWh of electricity whether it is produced from a renewable source or a diesel generator will feel just the same to a toddler sticking his finger in an electrical socket! Yet, environmental concerns (i.e. climate change, biodiversity) and geopolitical crises (i.e. war in Ukraine) forced us, the consumers, to think about how and where the energy we consume comes from. On our excursion to Pratteln's biopower and Birsfelden's hydropower plants, we will get the chance to learn about precisely this. Students will see in practice two alternative ways in which energy commodities are produced locally.

Infos

Date	Fr. 12.4.2024
Coordinator	Robin Argueyrolles (Robin.Argueyrolles@unibas.ch)
Target group	Bachelor and Master Student
Proof of performance	One-page report (in English only).
